Customer Reviews

This is the study guide for the textbook I purchased for a class in my Master's program. I have used it a lot and it is a very useful companion to the text book. I would suggest getting this with the book to make the reading easier.

The text is full of SO much information that I couldn't live without this study guide. It takes 100s of pages of information and reduces it down to a 1/10 the amt of pages with easy to read material. I'm very glad I purchased this awesome addition!

This book is pretty good as companion with the textbook. The chapters correlate well with the

chapters and helps abridge some of the most important information. This allows for easy highlighting of a particular subject. I recommend this book as well as the textbook for a good study of the important subject of pathophysiology.

This book was a requirement for the Advanced Pathophysiology class I was taking but it is not the best book I have used. I found that many times it would use concepts that were not yet explained and then cover them later in the textbook. Sold this book as soon as the class was over. I would recommend for a reference the book I used mostly Porth's Pathophysiology. Buy an older book if you must.

I was hoping this would just give me a general summary of all the key points, but for a lot of the review it tells you to review these or so pages in the book or this diagram in the book and so forth. I wish it would just summarize all chapters on most important facts. Not worth buying at all.

Having this book along with the textbook for my patho class was an absolute life saver. My instructor tested off of the objectives outlined in the study guide and having it greatly reduced my having to try to decipher what the objectives meant, or what pages to reference, as that information was provided within the study guide.

I always buy the study guides thinking they will help me focus on the material. I did not find that to be the case with this one. It has only been opened and glanced at once.

This is a required text for the course I am currently taking. I have not found it to be very useful. I prefer the resources available on the Evolve website.
